

MESSAGEmanager South Africa Opens for Business

In response to strong market growth, MESSAGEmanager Solutions today opened a new office in South Africa.

MESSAGEmanager South Africa will offer reseller opportunities to IP Telephony Resellers and multi-function device manufacturers, as well as provide pre and post-sales consulting and implementation services.

To build on its current base of customers in the region, MESSAGEmanager plans to engage in targeted business development activities to increase awareness of the brand with key prospects and partners.

“South Africa has a strong economy and a mature IT market which together with the growth in the sector has encouraged us to open a South African office,” says Ivor Livingston, CEO of MESSAGEmanager Solutions.

“MESSAGEmanager has enjoyed considerable success in the Asian, UK and Australian markets and with the new fibre optic cable linking South Africa to global networks we see IP technologies such as VoIP and T.38 IP fax taking off in South Africa,” says Livingston.

“We are looking forward to bringing a quality brand to the South African market,” says Livingston.
